Summary

Front-End Developer with hands-on experience building and maintaining Angular applications. I've worked on real-world projects ranging from management systems to enterprise applications, focusing on creating responsive user interfaces, integrating REST APIs, and writing clean, maintainable code. I enjoy solving problems, improving existing applications, and working closely with teams to deliver reliable and user-friendly solutions. I'm always looking to improve my skills and stay up to date with modern Angular development practices.

EDUCATION

Bachelor of Computer Science
Jerash University
2021

Experience

Angular Front-End Developer - Unlimited Innovation

Oct 2025 – Present

Working as an Angular Front-End Developer, developing and maintaining enterprise web applications for clients in Jordan and Saudi Arabia.

Responsibilities

- Develop and maintain Angular applications using Angular, TypeScript, RxJS, SCSS, and Angular Material.
- Build reusable components and shared modules to keep the codebase clean and maintainable.
- Integrate REST APIs and implement business requirements across different parts of the application.
- Refactor existing code to improve readability, maintainability, and performance without affecting existing functionality.
- Troubleshoot issues, fix bugs, and support production-ready applications.
- Work closely with backend developers, QA engineers, and UI/UX designers throughout the development process.
- Participate in technical discussions, feature implementation, and code reviews.
- Use Git and Azure DevOps as part of the team's daily development workflow.

Angular Front-End Developer - Ideal Innovation House

Dec 2024 – May 2025

Joined the team as an Angular Front-End Developer and worked on a Hotel Management System built for admins, employees, and customers. My main focus was developing new features, improving the user interface, and maintaining different parts of the application.

Responsibilities

- Built responsive pages and reusable UI components using Angular, SCSS, and Angular Material.
- Developed features using Reactive Forms and integrated them with REST APIs.
- Implemented role-based functionality for different types of users across the system.
- Worked on routing, authentication, and different booking and request management features.
- Organized the application into reusable components and followed a modular project structure.
- Worked with Git as part of the team's daily development workflow.
- Collaborated with other developers to deliver new features and improve the overall quality of the application.

Freelance Angular Front-End Developer

Aug 2023 – Nov 2024 (part-time)

Worked on Angular web applications for different business needs while working full-time in another role.

Responsibilities

- Built responsive user interfaces using Angular, HTML, SCSS, and Angular Material.
- Developed reusable components and implemented new front-end features.
- Worked with Reactive Forms, routing, authentication, and REST API integration.
- Built responsive layouts and maintained a clean, organized project structure.
- Worked closely with developers and clients to deliver project requirements.
- Used Git for version control throughout the development process.

Help Desk Technician - Shahwan Furniture

Jul 2022 – Jun 2024

Provided day-to-day technical support for employees across the company, helping resolve hardware, software, and basic network issues.

Responsibilities

- Diagnosed and resolved technical issues related to computers, printers, and software.
- Set up and maintained employee workstations and user accounts.
- Installed software, performed system updates, and carried out routine maintenance.
- Assisted with basic network troubleshooting and day-to-day IT support.
- Documented common issues and solutions to help improve the internal support process.

PROJECTS

The Line – Enterprise Internal System (Saudi Arabia)

Contributed to the front-end development of a large-scale enterprise system for a government client in Saudi Arabia.

Worked across multiple modules of the application, implementing new features, integrating REST APIs, improving existing functionality, and participating in refactoring large Angular components into smaller and more maintainable ones.

Contributed to enhancing the document management workflow, improving application performance, fixing production issues, and delivering new features as part of an Agile development team.

BETA Reporting System

Developed the front-end application from scratch using Angular for an internal reporting and inspection management system.

Designed the project structure, built reusable components, implemented routing, integrated REST

APIs, created responsive user interfaces, and collaborated closely with the backend developer throughout the project.

Hotels Management System (Angular Web Application)

Developed the front-end of a Hotel Management System used by administrators, employees, and customers.

Built features for room and hall reservations, service requests, user management, and dashboards.

Worked on authentication, Reactive Forms, REST API integration, lazy-loaded routing, and reusable Angular components.

Focused on building responsive interfaces, keeping the code organized, and creating a consistent user experience across the application.

Guzlan Delivery – Delivery Management System (Angular Web Application)

Developed the front-end of a delivery management system designed for administrators, clients, drivers, and customers.

Built dashboards, request management screens, and interactive forms using Angular, Angular Material, SCSS, and Reactive Forms. Integrated REST APIs, developed reusable components, and focused on creating responsive, easy-to-use interfaces across the application.

Management System (Angular Web Application)

Developed the front-end of a user management system using Angular.

Implemented authentication, user management, and CRUD operations. Built reusable components, integrated REST APIs, and created responsive pages while keeping the application organized and easy to maintain.

Technical Skills

Front-End Technologies

Angular, TypeScript, Standalone Components, Signals, JavaScript (ES6+), HTML5, CSS3, SCSS, Angular Material, RxJS

Angular

Reactive Forms, Routing, Route Guards, Lazy Loading, Dependency Injection, Component-Based Architecture

API Integration

REST APIs, HTTP Client, JSON

Tools

Git, GitHub, Azure DevOps, Postman, Visual Studio Code, Angular CLI, npm

Other

Responsive Web Design, Performance Optimization, Debugging, Agile / Scrum
